

# MESH BAG GUIDELINE

---

**RESIN GRADE:**

FDA Compliant

**TEMPERATURE WARNING:**

Approximate softening  
point of 150°C / 300°F

The mesh bag material conforms to relevant parts of FDA 21 CFR 175-178 for direct food contact and has passed the USP Testing for Class IV Plastic.

General temperature performance from the manufacturer states a softening point of approximately 150°C / 300°F. Because the material is used in a wide variety of conditions/ processes, the stated temperature parameter for softening may or may not apply to a customer's specific use.

Ultimately customers must make their own determination that use of this mesh bag is safe and suitable for their intended application. These mesh bags are considered consumable items that do degrade and should be expected to be replaced with continued use.
